                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                     483

Sequence 30, Application US/09201912
Sequence 30, Application US/09201912
Sequence 30, Application
Repair No. 6210962
GENERAL INFORMATION:
APPLICANT: Brechot, Chistian
APPLICANT: Remember, Dina
APPLICANT: Forchon, Colette
TITLE OF INVENTION: Nucleotide and Peptide Sequences of a
TITLE OF INVENTION: Nucleotide and Peptide Sequences of a
TITLE OF INVENTION: Applications
NUMBER OF SEQUENCES: 46
CORRESPONDENCE ADDRESS:
ADDRESSEE: Finnegan, Henderson, Farabow, Garrett &
ADDRESSEE: Dunnegan, Henderson, Farabow, Garrett &
ADDRESSEE: Punnegan, Henderson, Farabow, Garrett &

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

AATI2704-T12709 and AATI2961-T12974 represent hepatitis C virus (HCV) E1 and E2 protein coding sequence constructs. These sequences are included in vectors for the production of recombinant E31, E2, and E41/E2 proteins. C in vectoris for the production of recombinant E31, E2, and E41/E2 proteins. C invention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a carrying out a disulphide bond cleavage, or a reduction step with a carrying out a disulphide bond cleavage agent, after 1981s of recombinant host cells. The constructs containing the purified HCV envelope proteins can be used for vaccinating humans against HCV, for in vitro detection of HCV antibodies in a sample, and in a serotyping assay for detecting one or constructs can also be immobilised on a solid substrate and incorporated constructs can also be immobilised on a solid substrate and incorporated constructs of HCV. The new purification method preserves the conformation of the recombinantly expressed E1, E2 and E1/E2, and conformation of the recombinantly expressed E1, E2 and E1/E2, and eliminates contaminating proteins. Antigens isolated by known are meantly and and an erra than those isolated by known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Aggaacgccagcgrcacacaacaacaaraacgacgaccacgrcaarrrgcrcgrrggggcr 300

                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to new therapeutic vaccine compositions for inducing hepatitis C virus (HCV)-specific antibodies, comprising a composition containing at least one purified recombinant HCV single or specific oligomeric recombinant envelope proteins selected from an El and an E2 protein, and optionally a pharmaceutical adjuvant. The vaccines are useful for inducing HCV-specific antibodies or for immunising humans against HCV. The recombinant HCV E1 and/or E2 proteins are useful as against HCV. The recombinant HCV E1 and/or E2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for invitro monitoring of HCV disease or prognosing the response to in vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            into a reversed phase hybridisation assay for determining the presence or the genotype of HCV. The new purification method preserves the conformation of the recombinantly expressed E1, E2 and E1/E2, and eliminates contaminating proteins. Antigens isolated using this method are more reactive with human sera than those isolated by known

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAT12704-T12709 and AAT12961-T12974 represent hepatitis C virus (HCV) El and E2 protein coding sequence constructs. These sequences are included in vectors for the production of recombinant El, E2, and El/E2 proteins. The recombinant proteins can then be isolated using a method of the invention. In the method, the envelope proteins are purified by carrying out a disulphide bond cleavage, or a reduction step with a disulphide bond cleavage, or a reduction step with a disulphide bond cleavage, after lysis of recombinant host cells. The constructs containing the purified HCV envelope proteins can be used antibodies in a sample, and in a serotyping assay for detecting one or more serological types of HCV present in a biological sample. The constructs can also be immobilised on a solid substrate and incorporated

```

```
The present invention relates to new therapeutic vaccine compositions for inducing hepatitis C virus (HCV)-specific antibodies, comprising a composition containing at least one purified recombinant HCV single or specific oligomeric recombinant envelope proteins selected from an B1 and an B2 protein, and optionally a pharmaceutical adjuvant. The vaccines are
                                                                                                                          240

useful for inducing HCV-specific antibodies or for immunising humans against HCV. The recombinant HCV E1 and/or E2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for in vitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61
                                                                                                                                                                                                                                                                                                                                                                                     This sequence is the genome of the non-A, non-B hepatitis virus (NANBHV) strain HC-J4. This sequence was derived by amplification by polymerase chain reaction. The nucleotide sequences derived from this amplification can be used to detect NANBHV infection which could not be detected by conventional methods. The detection kits allow highly specific and sensitive detection at an early phase of infection. The polypeptide product of this coding sequence can be used for the manufacture of vaccines and immunological pharmaceuticals and also to produce antibodies specific to NANBHV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1207 AGCTGTTCACCTTCTCGCCTCGCCGCATGAGACAGTGCAGGACTGCAGCTGCTCAATCT

The polypeptide it encodes may be used in a system for detecting NANB hepatitis. This method is highly specific and sensitive, and can detect NANB hepatitis virus which could not be detected by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antigen related to non-A and non-B hepatitis virus - comprises on-translation region comprising 340 - 341 mols. of nucleotides, non-translation region comprising 1885 - 2551 mols. of nucleotides including region 1,149 and, etc.

                                                                                                                                                                                                                                                               NANB hepatitis virus strain HC-J4 was isolated from a plasma sample of a chimpanzee challenged with NANB hepatitis for infectivity but which tested negative for HCV antibody by Ortho HCV Ab ELISA test. RNA was isolated from the sample and reverse transcribed into cDNA. The 513 amino acids encoded by the CDS were determined but are not given in the specification (and hence are not included in A-Geneseq). A study of the deduced sequence suggested that the CDS encodes NANBH virus core proteins. Primers for detecting NANB hepatitis virus were
                                                                                                        crecriricistricescrateraceresesarcrerecesarcreritrece

These fragments were amplified using the primers given in AAQ63732-51. These primers were used in the detection of NANBH. The primers are based on the 5'-terminal region and the core protein coding region. The method allows highly sensitive

                                                                                                                                                                                  This sequence represents the 5' region of hepatitis C virus RNA. The original sample was obtained from human and chimparazee plasma. RNA was isolated from several samples and homology compared, and the respective sequence of about 1900 - 2500 nucleotides of the 5' region (given) contains a non-cading region of at least 340 mucleotides and a region coding for the structural protein followed by a region coding for the non-structural protein (none actually detailed on the sequence given in the specification). When compared humblogy of 80.5%.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB 13; Length 2540;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  996
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               121
                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence comprises the nucleic acid sequence of the genome of infectious hepatitis C virus (HCV) genotype lb strain HC-J4 (ArCC 209596) that is capable of expressing this virus when transfected into cells. HC-J4 was obtained from acute phase plasma of a chimpanzee experimentally infected with serum containing of a chimpanzee experimentally infected with serum containing to produce chimeric genomes (see AAX24833) consisting of the open comproves of infectious nucleic acid sequences of other reading frames of infectious nucleic acid sequences of other comproves (including genotypes 1-6) and subtypes (such as lb, 2a, 2a, 2a, 3a, 4a-f, 5a and 6a) of HCV. The invention also relates to the introduction of mutations or deletions into infectious nucleic acid sequences can each sequence in order to produce an attenuated HCV virus suitable controlled to produce attenuated virus via passage in vitro or in also be used to produce attenuated virus via passage in vitro or the infectious nucleic acid sequence are comprising one or the infectious mucleic acid sequences con sead to induce protective controlled sequences can shalp be used to immunise mammals, especially humans, against hepatitis C cused to immunise mammals, especially humans, against hepatitis C cused to immunity against the virus. The nucleic acid sequences can also be used to induce protective immunity against the virus. The nucleic acid sequences or their concoded proteases (e.g. NS3 protease) can additionally be used to develop screening assays to identify antiviral agents for HCV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GGAACGCCAGCGTCCCCACAACAACAACACGCCACGTCGATTGCTCGTTGGGGCTG

The specification describes a nucleic acid comprising a chimeric virus genome, specifically bovine viral diarrhoea virus (BVDV) genome in which the (non-)structural region has been replaced by the (non-)structural region has been replaced by the (non-)structural region of a hepatitis C virus (HCV) genome. The nucleic acids comprising the chimeric virus and the chimeric virus and the chimeric virus and the chimeric virus supporting the replication of these chimeric viruse, in screening for neutralizing antibodies to HCV of different viruses, in screening for neutralizing antibodies to HCV of different contributed or attenuated vaccines to prevent HCV-BVDV in a mammal, of inactivated or attenuated vaccines to prevent HCV-BVDV in a mammal, of inactivated or attenuated vaccines to prevent HCV-BVDV in a mammal, of inactivated or attenuated vaccines to prevent HCV-BVDV in a mammal, and attivity in hibbitors of viral enzyme activity which would be useful as antiviral agents. Formulations or compositions comprising the chimeric virions may be used to treat or prevent the signs and symptoms of HCV. The present sequence represents a HCV clone, which is used to construct chimeric nucleic acids of the invention. 1207 AGCTGTTCACCTTCTCGCCTCGCCGCCATGAGACAGTGCCAGACTGCAACTGCTAATCT 1266 1087 GGAATGCCAGGTCCCCACTACGACAATACGACGCCACGTCGACTTGCTCGTTGGGACGG 1146 421 Chimeric virus; bovine viral diarrhoea virus; BVDV; hepatitis C virus; HCV; vaccine; viral inhibitor; antiviral; ss. 362 AGCTGTTCACCTTCTCACCTCGCCGGCATCAAACAGTACAGGACTGCAACTGGTCAATCT New nucleic acid comprising a chimeric bovine viral diarrhoea virus genome in which the (non-)structural region has been replaced by hepatitis C virus (HCV) genome useful for treating or preventing HCV CTGCTTTCTGTTCCGCTATGTACGTGGGGGATCTCTGCGGGATCTGTTTCCTTGTTTCCC ATCCCGGCCATGTATCAGGTCACCGCATGGCTTGGGGATATGATGAACTGGTAA 477 Nucleotide sequence of a hepatitis C virus (HCV) clone genotype lb.
